

Jacob Anderson

Computer Engineer | Patent Technical Specialist | Software Developer

Atlanta Metropolitan Area | 404-626-0025 | jacob@jacobdanderson.net | jacobdanderson.net | github.com/Jacoba1100254352

M.S. Computer Engineering candidate and Patent Technical Specialist with hands-on experience in software, embedded systems, research tooling, technical operations, and production web applications. Build and maintain TypeScript, Vue, Nuxt, Node.js, Python, and Linux systems with documented test, deployment, and operational workflows.

PROFESSIONAL EXPERIENCE

Patent Technical Specialist Aug 2026 - Present
Meunier Carlin & Curfman LLC, Atlanta Metropolitan Area

- Analyze invention disclosures and technical discussions across electrical, computer, biomedical, and related technologies.
- Assist with claims, technical descriptions, figures, application strategy, and research under attorney supervision; continued after a summer 2026 internship.

Programmer and Technical Operations May-Aug 2020; Mar 2026-Present
AudioT

- Program Raspberry Pi devices in Python and Bash and document sensor-data collection for prototype iteration.
- Configure Debian-based infrastructure for remote audio ingest, deployment tooling, and field-readiness validation.

Production Web and CMS Portfolio 2025 - Present
Independent Portfolio

- Build and maintain deployed Vue, Nuxt, Vite, and TypeScript sites with Express, Nitro, MongoDB, Postgres, and SQLite services.
- Implement responsive interfaces, content workflows, forms, admin surfaces, readiness checks, and source-backed publishing systems.
- Use npm workspaces, GitHub, Vitest, Cypress, browser automation, linting, type checks, and repeatable build and release gates.

SELECTED ENGINEERING AND RESEARCH

Undergraduate Researcher Sep 2022 - Oct 2024
Brigham Young University

- Integrated sensing hardware for a non-invasive glucose-monitoring prototype and built MATLAB and Python workflows for signal processing, calibration, and analysis.

IMMERSE Summer Researcher Summer 2024
Purdue SCALE x Brigham Young University

- Implemented Xschem and Ngspice workflows for the OSCRE radiation-effects framework, documented repeatable setup, and co-authored the ISCAS 2025 paper.

Co-Founder and CTO Sep 2025 - Aug 2026
Stride

- Directed prototype and product architecture for a rental-based backcountry search-and-rescue device concept with location and alert workflows.

EDUCATION

M.S. Computer Engineering Georgia Institute of Technology Graduate GPA: 3.50 through Spring 2026	Expected May 2027	B.S. Computer Engineering Brigham Young University Minor in Computer Science Cumulative GPA: 3.79	Apr 2025
---	-------------------	--	----------

TECHNICAL SKILLS

Programming: Python, C, C++, MATLAB, TypeScript, JavaScript, Java, Bash, SystemVerilog, Verilog, VHDL	Web and data: Vue, Nuxt, Vite, Node.js, Express, HTML, CSS, MongoDB, Postgres, SQLite
Systems: Linux, Git, Raspberry Pi, embedded systems, sensor integration, telemetry, communication systems	Quality: Vitest, Cypress, browser automation, ESLint, type checking, CI/CD, deployment verification

Publication: Co-author, "Open-Source Circuit Radiation Effects (OSCRE) Simulation Framework: Design and Applications," IEEE ISCAS 2025.
